Developing agents that will selectively act upon PDEs is directed toward reproducing the desirable effects of cyclic nucleotides, e.g. bronchodilation, increased myocardial contractility, anti-inflammation, yet without causing the undesirable effects, e.g. increased heart rate or enhanced lipolysis. The products can also be used for therapeutic, diagnostic and prognostic uses. AAX32229 to AAX32285, and AAX48803 to AAX49830, represent sequences used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 3987

The DNA molecules are used to modify, complement or suppress a genetic defect in a biochemical pathway in which cAMP participates and are also used as hybridisation probes. The present invention also describes methods for detecting mammalian genes encoding proteins which can function in microorganisms, particularly yeast, to modify, complement, or suppress a genetic defect associated with an identifiable phenotypic alteration or characteristic in the microorganism. AAA88162 to AAA88218 and AAB29614 to AAB20640 represent sequences used in the exemplification of the present invention.

The invention relates to isolated nucleic acid molecules and their encoded secreted proteins. The nucleic acids and proteins are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility to a pathological condition. Antibodies to the proteins can also be used in alleviating symptoms associated with the disorders and in diagnostic immunoassays e.g. radioimmunoassays or enzyme linked include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. rheumatoid arthritis, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders
                                                                                                                                                                                                                                                                                                     Novel polypeptides and polynucleotides useful as diagnostic reagents to diagnose diseases or disorders associated with aberrant expression or activity of polypeptides, for treating blood clotting disorder, haemophilia
                                                                                                                                                                                                                                                                     Claim

CC The peptide fragments can be used to construct a phosphodiesterase enzyme sequence from a formula of the invention. The phosphodiesterase polynucleotide and polypeptide may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate PDE-XIV carpression. For example, the polynucleotide be administered to treat diseases by rectifying mutations or deletions in a patient's genome that affect the activity of PDE-XIV. They may also be used to study the expression and function of PDE-XIV polypeptides and their role in metabolism. The pDE-XIV polypeptides may be used as antigens in the production of antibodies against pDE-XIV and in assays to identify composition for the treatment of a disorder associated with CC activity. The anti-pDE-XIV expression and activity (i.e. the DE-XIV gene and/or expression product may be used in the preparation of a composition for the treatment of a disorder associated with CC agents that can modulate PDE-XIV expression and or activity includes may also be used as diagnostic agents for CC anti-pDE-XIV antibodies may also be used as diagnostic agents for CC detecting the presence of PDE-XIV polypeptides in samples (e.g. by CC enzyme linked immunosorbant assay (ELISA)).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

English

The present sequence represents a phosphodiesterase (PDE)-XIV enzyme. ? phosphodiesterase polynucleotide and polypeptide may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate PDE-XIV expression. For example, the polynucleotide be administered to treat diseases by rectifying mutations or deletions in a patient's genome that affect the activity of PDE-XIV. They may also be used to study the expression and function of PDE-XIV

Nucleic acids encoding recombinant phosphodiesterase (PDE)-XIV enzymes, useful for preventing diagnosing and treating diseases associated with inappropriate PDE-XIV expression and/or activity -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          QΥ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CC prevention, treatment and diagnosis of diseases associated with CC inappropriate PDE-XIV expression. For example, the polynucleotide CC be administered to treat diseases by rectifying mutations or deletions CC in a patient's genome that affect the activity of PDE-XIV. They may CC also be used to study the expression and function of PDE-XIV polypeptides CC may be used as antigens in the production of antibodies against PDE-XIV CC and in assays to identify modulators (agonists and antagonists) of CC PDE-XIV expression and activity. The anti-PDE-XIV antibodies and CC PDE-XIV antagonists may also be used to down regulate PDE-XIV expression CC and activity (i.e. the PDE-XIV yene and/or expression product may be come activity (i.e. the PDE-XIV expression for the treatment of a disorder CC associated with inappropriate PDE-XIV expression and/or activity and to CC creen for agents that can modulate PDE-XIV expression and or activity. The anti-PDE-XIV antibodies may also be used as diagnostic agents for CC detecting the presence of PDE-XIV polypeptides in samples (e.g. by CC enzyme linked immunosorbant assay (BLISA)).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches

The present sequence represents a phosphodiesterase (PDE)-XIV enzyme. The enzyme sequence is derived from a formula of the invention. The phosphodiesterase polynucleotide and polypeptide may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate PDE-XIV expression. For example, the polynucleotide be administered to treat diseases by rectifying mutations or deletions in a patient's genome that affect the activity of PDE-XIV. They may also be used to study the expression and function of PDE-XIV polypeptides may be used as antigens in the production of antibodies against PDE-XIV and in assays to identify modulators (agonists and antagonists) of PDE-XIV expression and activity. The anti-PDE-XIV antibodies and DDE-XIV antagonists may also be used to down regulate PDE-XIV expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (PFIZ ) |

CC The enzyme sequence is derived from a formula of the invention. The CD phosphodiesterase polynucleotide and polypeptide may be used in the CC inappropriate PDE-XIV expression. For example, the polynucleotide CC inappropriate PDE-XIV expression. For example, the polynucleotide CC in a patient's genome that affect the activity of PDE-XIV. They may CC also be used to study the expression and function of pDE-XIV. They may CC may be used as antigens in the production of antibodies against PDE-XIV cC and in assays to identify modulators (agonists and antagonists) of CC PDE-XIV expression and activity. The anti-PDE-XIV antigonists may also be used to down regulate PDE-XIV expression cC and activity (i.e. the PDE-XIV gene and/or expression product may be used in the preparation of a composition for the treatment of a disorder CC associated with inappropriate PDE-XIV expression and/or activity and to CC The anti-PDE-XIV antibodies may also be used as diagnostic agents for CC detecting the presence of PDE-XIV oxpression and/or activity and to CC contact of the presence of PDE-XIV polypeptides in samples (e.g. by enzyme linked immunosorbant assay (ELISA)).
                                                                                                                                                                                                                                                             Matches

                                                                                                                                                                                                                                                                                                                                                                                                              may be used as antigens in the production of antibodies against PDE-XIV and in assays to identify modulators (agonists and antagonists) of PDE-XIV expression and activity. The anti-PDE-XIV antibodies and PDE-XIV expression and activity (i.e. the PDE-XIV gene and/or expression product may be used in the preparation of a composition for the treatment of a disorder associated with inappropriate PDE-XIV expression and/or activity and to screen for agents that can modulate PDE-XIV expression and or activity. The anti-PDE-XIV antibodies may also be used as diagnostic agents for detecting the presence of PDE-XIV polypeptides in samples (e.g. by enzyme linked immunosorbant assay (ELISA)).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence represents a phosphodiesterase (PDE)-XIV enzyme. The enzyme sequence is derived from a formula of the invention. The phosphodiesterase polynucleotide and polypeptide may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate PDE-XIV expression. For example, the polynucleotide be administered to treat diseases by rectifying mutations or deletions in a patient's genome that affect the activity of PDE-XIV. They may also be used to study the expression and function of PDE-XIV polypeptides and their role in metabolism. The PDE-XIV polypeptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Nucleic acids encoding recombinant phosphodiesterase (PDE)-XIV enzymes useful for preventing diagnosing and treating diseases associated with inappropriate PDE-XIV expression and/or activity -
                                                                                                                                                                                                                                                                                                                                                                                         Sequence

The present sequence represents a phosphodiesterase (PDE)-XIV enzyme. The phosphodiesterase polynucleotide and polypeptide may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate PDE-XIV expression. For example, the polynucleotide be administered to treat diseases by rectifying mutations or deletions in a patient's genome that affect the activity of PDE-XIV. They may calso be used to study the expression and function of PDE-XIV also be used to study the expression and function of PDE-XIV. They may be used as antigens in the production of antibodies against PDE-XIV and in assays to identify modulators (agonists and antagonists) of PDE-XIV expression and activity. The anti-PDE-XIV antagonists may also be used to down regulate PDE-XIV expression of a composition for the treatment of a disorder associated with inappropriate PDE-XIV expression and/or activity and to screen for agents that can modulate PDE-XIV expression and or activity. The anti-PDE-XIV expression and or activity. The anti-PDE-XIV expression and or activity and to composite the preparation of a composition for the treatment of a disorder associated with inappropriate PDE-XIV expression and/or activity. The anti-PDE-XIV antibodies may also be used as diagnostic agents for detecting the presence of PDE-XIV polypeptides in samples (e.g. by

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       QΥ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence represents a phosphodiesterase (PDE)-XIV enzyme. CC The enzyme sequence is derived from a formula of the invention. The CD phosphodiesterase polynucleotide and polypeptide may be used in the CC prevention, treatment and diagnosis of diseases associated with CC inappropriate PDE-XIV expression. For example, the polynucleotide CC be administered to treat diseases by rectifying mutations or deletions CC in a patient's genome that affect the activity of PDE-XIV. They may CC also be used to study the expression and function of PDE-XIV polypeptides and their role in metabolism. The PDE-XIV polypeptides CC may be used as antigens in the production of antibodies against PDE-XIV and in assays to identify modulators (agonists and attagonists) of CC PDE-XIV antagonists may also be used to down regulate PDE-XIV expression and/or expression product may be used in the preparation of a composition for the treatment of a disorder CC associated with inappropriate PDE-XIV expression and/or activity and to associated with inappropriate PDE-XIV expression and/or activity and to CC The anti-PDE-XIV antibodies may also be used as diagnostic agents for CC detecting the presence of PDE-XIV polypeptides in samples (e.g. by CC enzyme linked immunosorbant assay (ELISA)).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

The anti-PDE-XIV antibodies and PDE-XIV expression and activity (i.e. the PDE-XIV gene and/or expression product may be used in the preparation of a composition for the treatment of a disorder associated with inappropriate PDE-XIV expression and/or activity and to screen for agents that can modulate PDE-XIV expression and or activity. The anti-PDE-XIV antibodies may also be used as diagnostic agents for detecting the presence of PDE-XIV polypeptides in samples (e.g. by enzyme linked immunosorbant assay (ELISA)).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     prevention, treatment and diagnosis of diseases associated with inappropriate PDE-XIV expression. For example, the polynucleotide be administered to treat diseases by rectifying mutations or deletions in a patient's genome that affect the activity of PDE-XIV. They may also be used to study the expression and function of PDE-XIV polypeptides and their role in metabolism. The PDE-XIV polypeptides

                                                                    ij
                                                                                                                The invention relates to a novel human Phosphodiesterase type 7B CC polypeptide and the nucleic acid that encodes it. The protein and nucleic acid may be used in the prevention, diagnosis and treatment of diseases CC associated with inappropriate phosphodiesterase 7B (77B) expression. For CC disorders associated with inappropriate phosphodiesterase 7B (77B) expression. For CC disorders associated with decreased expression by rectifying mutations CC or deletions in a patient's genome that affect the activity of P7B by CC expressing inactive proteins or to supplement the patients own CC production of P7B. The nucleic acids may be used to produce P7B CC polypeptides, by inserting the nucleic acids into a host cell and CC polypeptides, by inserting the nucleic acids into a host cell and CC complements may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and CC and quantitate the presence of similar nucleic acids in samples, and CC expression and activity. The anti-P7B complements may also be used as antigons in the production of CC expression and activity. The anti-P7B antibodies and antagonists may CC also be used to down regulate expression and activity. The anti-P7B complements are presented to down and antipositic agents for detecting the CC presence of P7B in samples (e.g. by enzyme linked immunosorbent assay the above methods include, for example cardiovascular disease, asthma, CC canterior represents a human chospholisterase 7B.

The present sequence represents a phosphodiesterase (PDE)-XIV enzyme. CC The enzyme sequence is derived from a formula of the invention. The CD phosphodiesterase polynucleotide and polypeptide may be used in the CC prevention, treatment and diagnosis of diseases associated with the CC inappropriate PDE-XIV expression. For example, the polynucleotide CC in a patient's genome that affect the activity of PDE-XIV. They may CC also be used to study the expression and function of pDE-XIV polypeptides and their role in metabolism. The PDE-XIV polypeptides cc may be used as antigens in the production of antibodies against PDE-XIV and in assays to identify modulators (agonists and antagonists) of CC PDE-XIV expression and activity. The anti-PDE-XIV antagonists and activity. The arti-PDE-XIV antagonists and activity and activity and activity and activity of a composition for the treatment of a disorder CC used in the preparation of a composition for the treatment of a disorder CC used in the preparation of a composition for the treatment of a disorder cassociated with inappropriate PDE-XIV expression and/or activity and to constated with inappropriate PDE-XIV expression and/or activity and to constated with inappropriate PDE-XIV expression and/or activity and to constant of the presence of PDE-XIV polypeptides in samples (e.g. by CC enzyme linked immunosorbant assay (ELISA)).

They can also be used in diagnosing a pathological condition. The antibodies to the proteins can also be used in alleviating symptoms associated with the disorders and in diagnostic immunoassays e.g. radioimmunoassays or enzyme linked immunosorbent assays (ELISA). Disorders which are diagnosed or treated include autoimmune diseases e.g. repumatoid arthritis, hyperproliferative disorders e.g. copplasms of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, verbrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest of the breast of the polyperiodes can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities. The present

mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They can also be used in diagnosing a pathological condition. The antibodies to the proteins can also be used in alleviating symptoms associated with the disorders and in diagnostic immunoassays e.g. radioimmunoassays or enzyme linked immunosorbent assays (ELISA). Disorders which are diagnosed or treated include autoimmune diseases e.g. repeumatoid arthritis, they are polificative disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cerebral ischemia, angiogenesis, nervous system disorders e.g. Alzheimer's disease, infections caused by bacteria, viruses and fungi and cular disorders e.g. corneal infection. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ni J,

                                                                                                              Дb
                                                                                                                                                                                                                                                                                                                            The invention provides novel human secreted proteins and polynucleotides CC encoding them. The secreted proteins can be expressed by standard CC recombinant methodology. The secreted proteins and polynucleotides are used to prevent, treat or ameliorate a medical condition in e.g. humans, CC mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They can calso be used in diagnosing a pathological condition. The antibodies to CC the proteins can also be used in alleviating symptoms associated with the CC disorders and in diagnostic immunoassays e.g. radioimmunoassays or enzyme CC linked immunosorbent assays (ELISA). Disorders which are diagnosed or CC treated include autoimmune diseases e.g. repumatoid arthritis, CC hyperproliferative disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, rerborovascular disorders e.g. cardiac arres

RY Cloning and characterisation of the human and mouse PDE7B, a novel camp-specific nuclectide phosphodiesterase.";

RY DEFORMANCE REPORTION: RES. Commun. 272.186-192(2000).

RY DIVITION: MAY BE INVOLVED IN THE CONTROL OF CAMP-MEDIATED NEURAL CATIONS (BY SIMILARITY).

REPORTING ACTIVITY ADENOSINE 3',5'-CYCLIC PHOSPHATE + H(2)O = ADENOSINE 5'-PHOSPHATE BY DIVALENT CATIONS (BY SIMILARITY).

REPORTING REGULATION: INHIBITED BY DIVERIDAMOLE, IBMX AND SCH51866.

RY DIVERSE REGULATION: INHIBITED BY DIVERIDAMOLE, IBMX AND SCH51866.

RY DIVERSOR OF A C-TERMINAL CATALYTIC DAMAIN. ALSO EXPRESSED IN HEART, LIVER, SKELETAL MUSCLE AND PANCREAS.

RY DOMAIN: COMPOSED OF A C-TERMINAL CATALYTIC DOMAIN CONTAINING TWO PUTATIVE DIVALENT METAL SITES AND AN N-TERMINAL CATALYTIC DOMAIN.

RY DOMAIN: COMPOSED OF A C-TERMINAL CATALYTIC DOMAIN CONTAINING TWO PUTATIVE DIVALENT METAL SITES AND AN N-TERMINAL CATALYTIC DOMAIN.

RY DOMAIN: COMPOSED OF A C-TERMINAL CATALYTIC DOMAIN CONTAINING TWO PUTATIVE DIVALENT METAL SITES AND AN N-TERMINAL REGULATORY DOMAIN.

RY DOMAIN: COMPOSED OF A C-TERMINAL CATALYTIC DOMAIN CONTAINING TWO PUTATIVE DIVALENT METAL SITES AND AN N-TERMINAL CATALYTIC DOMAIN.

 N
 SUBCELLULAR LOCATION: Secreted but remains associated to cells or to the extracellular matrix unless released by heparin.

ALTERNATIVE PRODUCTS: At least 2 isoforms; VEGF-B186 (shown here) and VEGF-B167; are produced by alternative splicing.

TISSUE SPECIFICITY: Expressed in all tissues except liver. Highest levels found in heart, skeletal muscle and pancreas.

PTM: VEGF-B186 is 0-glycosylated (By similarity).

SIMILARITY: BELONGS TO THE DGF/VEGF FAMILY OF GROWTH FACTORS.
